

Project Synopsis and Requirements

Project Title:- Stress detection using python

Project Abstract:-

Now a days people are suffering from excessive stress problems. People are stressed for various reasons like career, family etc. So as a result mental health of the people are damaged. It's causes suicide, fatal health problems. It is also be used heavy stressed personalities like army, police so that they perform their duties well.

So we came up with a solution to build a system that detects human stress level. It uses various emotions recognition to detect a human stress level.

This system can be used as a medical diagnosis. As a result of this system excessive stressed related issues like suicide, depression etc can be reduced.

No of PCs required:- 1

PC configuration:-

- Windows 10.
- SQL 2008
- Visual studio 2010
- Processor → i3 (Minimum)
- Hard Disk → 10 GB (Free Space)
- Memory → 4GB RAM
- Internet Connection → 4G

Any other device(s) required

- Peripheral
- High resolution camera/webcam

OS with required version:-

- Windows 10

Softwares required with version of each:-

1. Python 3
2. gunicorn==20.0.4
3. numpy==1.22.0
4. opencv-python==4.5.3.56
5. boost==0.1
6. cmake==0.7.1
7. Click>=6.0
8. dlib>=19.3.0
9. flask==1.1.1
10. scipy>=0.17.0
11. matplotlib==3.1.1
12. imutils==0.5.3
13. requests>=2.20.0
14. scikit-learn==0.20.0
15. tensorflow==2.7.2
16. keras==2.2.3
17. pillow==9.0.1
18. jupyter==1.0.0
